

115 KING WILLIAM STREET

MATERIALS: KingFlor® CF210
BUILDER: Synergy Constructions
ENGINEER: PT Design
TECHNICIAN: Dash Architects

PROJECT SPECIFICS

- Total of 6,100 m² of KingFlor CF210
- 1.21mm bmt steel formwork
- 6.5m sheet length
- Steel grade: G550

THE PROJECT

The King William Street project is a commercial building located in the heart of Perth, Western Australia. The project involves the construction of a multi-story office building with a total area of 6,100 m². The building is designed to be a modern, sustainable structure that meets the needs of a growing business. The project was completed in 2023 and is now open for business.

THE SOLUTION

Using Fielders KingFlor CF210 formwork, the construction team was able to achieve a high-quality finish for the concrete slabs. The formwork was easy to install and remove, and it provided excellent support for the concrete during the curing process. The result was a smooth, uniform surface that met the project requirements.

THE PROCESS

The construction process involved the use of Fielders KingFlor CF210 formwork for the concrete slabs. The formwork was installed in a way that allowed for easy access to the concrete during the pouring and curing process. The construction team followed a strict schedule to ensure that the project was completed on time.

FIELDERS KingFlor®

Fielders KingFlor CF210 formwork is a high-quality, durable solution for concrete construction. It is designed to provide excellent support for the concrete during the curing process, ensuring a smooth, uniform finish. Fielders KingFlor CF210 formwork is easy to install and remove, and it is available in a range of sizes and configurations to meet your specific needs.
