Officially opened in October 2015, the $1.97 million Laurimar Reserve Sports Pavilion located in Doreen, Victoria brings together the Laurimar community football, netball, cricket and basketball clubs under one roof, while also functioning as a meeting point for other local community groups and social clubs.

Fielders was contracted in partnership with Vault Plumbing to provide 260m² of Zinc ARAMAX FreeSpan as the roofing solution for the contemporary sporting facility which began construction in February 2015.

The new building includes mixed change rooms and umpires’ facilities, accessible toilets and increased storage spaces for the clubs and community groups, as well as extensions to the existing canteen and spectator decking areas.

ARAMAX FreeSpan 800 was supplied by Fielders during the 2015 construction phase of the project. The material was rolled at the Mile End Mill in South Australia before being placed into stillages and then transported to the job site in Victoria. The experienced engineering team from Fielders were on site throughout to provide advice during the installation process.

Fielders ARAMAX FreeSpan structural cladding system is a unique V-shaped roofing profile that is bigger, bolder and deeper than conventional steel cladding profiles available on the market. The product is manufactured in standard 800mm cover width, with 700mm to 900mm cover widths available upon request.

ARAMAX FreeSpan is produced on a mobile roll-former and has the unique ability to be rolled onsite anywhere in the world, reducing construction time and improving project efficiencies. Project applications include commercial buildings, residential houses, shade structures and commercial shelters.
